

# Car Wash Kit Instructions

## What's Included:

1. Safety Cones
2. Water Barrier
3. Extension Cord
4. Garden Hose
5. Water Pump
6. Car Wash Sign
- \*7. GFCI Adapter

\* Make sure the site is near an electrical source, and a vegetated area or outdoor sink. If you can, use phosphate-free, biodegradable soap

1. Place safety cones around the storm drain.
2. Fill the rubber water barriers with a hose. Place water barriers in a U-shape pointing away from the drain (see diagram). **The idea is for the water to pool up inside the U-shape.**
3. Place the water pump inside the U-shape.
4. Plug the water pump into the extension cord.
  - \* A GFCI adapter may be a good idea – check with the host building.
5. Attach the garden hose to the water pump.
6. Place the other end of the hose in a sewer outlet (like a sink) if available. Otherwise, a patch of grass will be sufficient.

When finished, drain the water from the hose and pump, dry the equipment, and return the kit

## Thank you for using this kit!
